DETAILED ACTION

Remarks

This Office action is responsive to applicant's amendment filed on December 17, 2009.

Claims 1-12 are pending.

Claim Rejections - 35 USC § 112

The rejection of claims 1, 5 and 6 under 35 U.S.C. 112, first paragraph has been withdrawn.

The rejection of claims 1-6, 9 and 12 under 35 U.S.C. 112, second paragraph has been withdrawn.

Claim Rejections - 35 USC § 102 and 103

The rejection of claims 2 and 5-10 under 35 U.S.C. 102(b) based on Krasij et al. (U.S. Pat. 5,264,299) has been withdrawn.

The rejection of claims 1, 3, 4, 11 and 12 under 35 U.S.C. 103(a) based on Krasij et al. (U.S. Pat. 5,264,299) and Matlock et al. (U.S. Pat. 6,261,711) has been withdrawn.

The prior art rejections based on Krasij et al. have been withdrawn. On further consideration, the examiner concedes with applicant's argument that Krasij et al. does not teach a second diffusion layer having a second jutting-out portion that juts out from the periphery of the second electrode layer. In Krasij et al., the electrode layers are specifically disclosed to correspond to the catalyst formations/layers at the major surfaces of the support plates [22, 23]

(corresponding in turn to the first and second diffusion layers) facing the proton exchange membrane. (col. 5 lines 1-6) As the catalyst formations are along the major surfaces of the diffusion layers *facing* the proton exchange membrane, it follows that the diffusion layer is the same peripheral dimension as its corresponding electrode. Thus, the argument that Krasij et al. does not teach a second diffusion layer having a second jutting-out portion that juts out from the periphery of the second electrode layer has been fully considered and is persuasive.

Allowable Subject Matter

Claims 1-12 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or suggest the instant invention regarding a polymer electrolyte membrane having a first jutting-out portion that juts out from the peripheries of a first diffusion layer and a first electrode layer and a second diffusion layer having a second jutting-out portion that juts out from the periphery of a second electrode layer, where at least one portion of the second jutting-out portion is impregnated with cured adhesive.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Pat. 6,261,711 to Matlock et al. is cited of cumulative relevance. The examiner notes that the presence of seals [110, 150] along the periphery of the electrode layers precludes the claimed impregnation of a cured adhesive.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
